

Sequence Diagram

- Draw Sequence diagram for method dispatch being invoked on an Order object (dispatch is a method in class Order). Aside from object Order, there are two Distributor objects (careful and regular), and one messenger object.

procedure dispatch

```
foreach (lineitem)
```

```
  if (product.value > $10K)
    careful.dispatch()
  else
    regular.dispatch()
  end if
```

```
end for
```

```
if (needsConfirmation) messenger.confirm()
```

```
end procedure
```

1. Determine objs & blocks

- There are **FOUR objects**: Order object, two Distributor objects (careful and regular), and one messenger object.
- There are **THREE blocks**: foreach block, if-else block, if block.

procedure dispatch

```
foreach (lineitem)
```

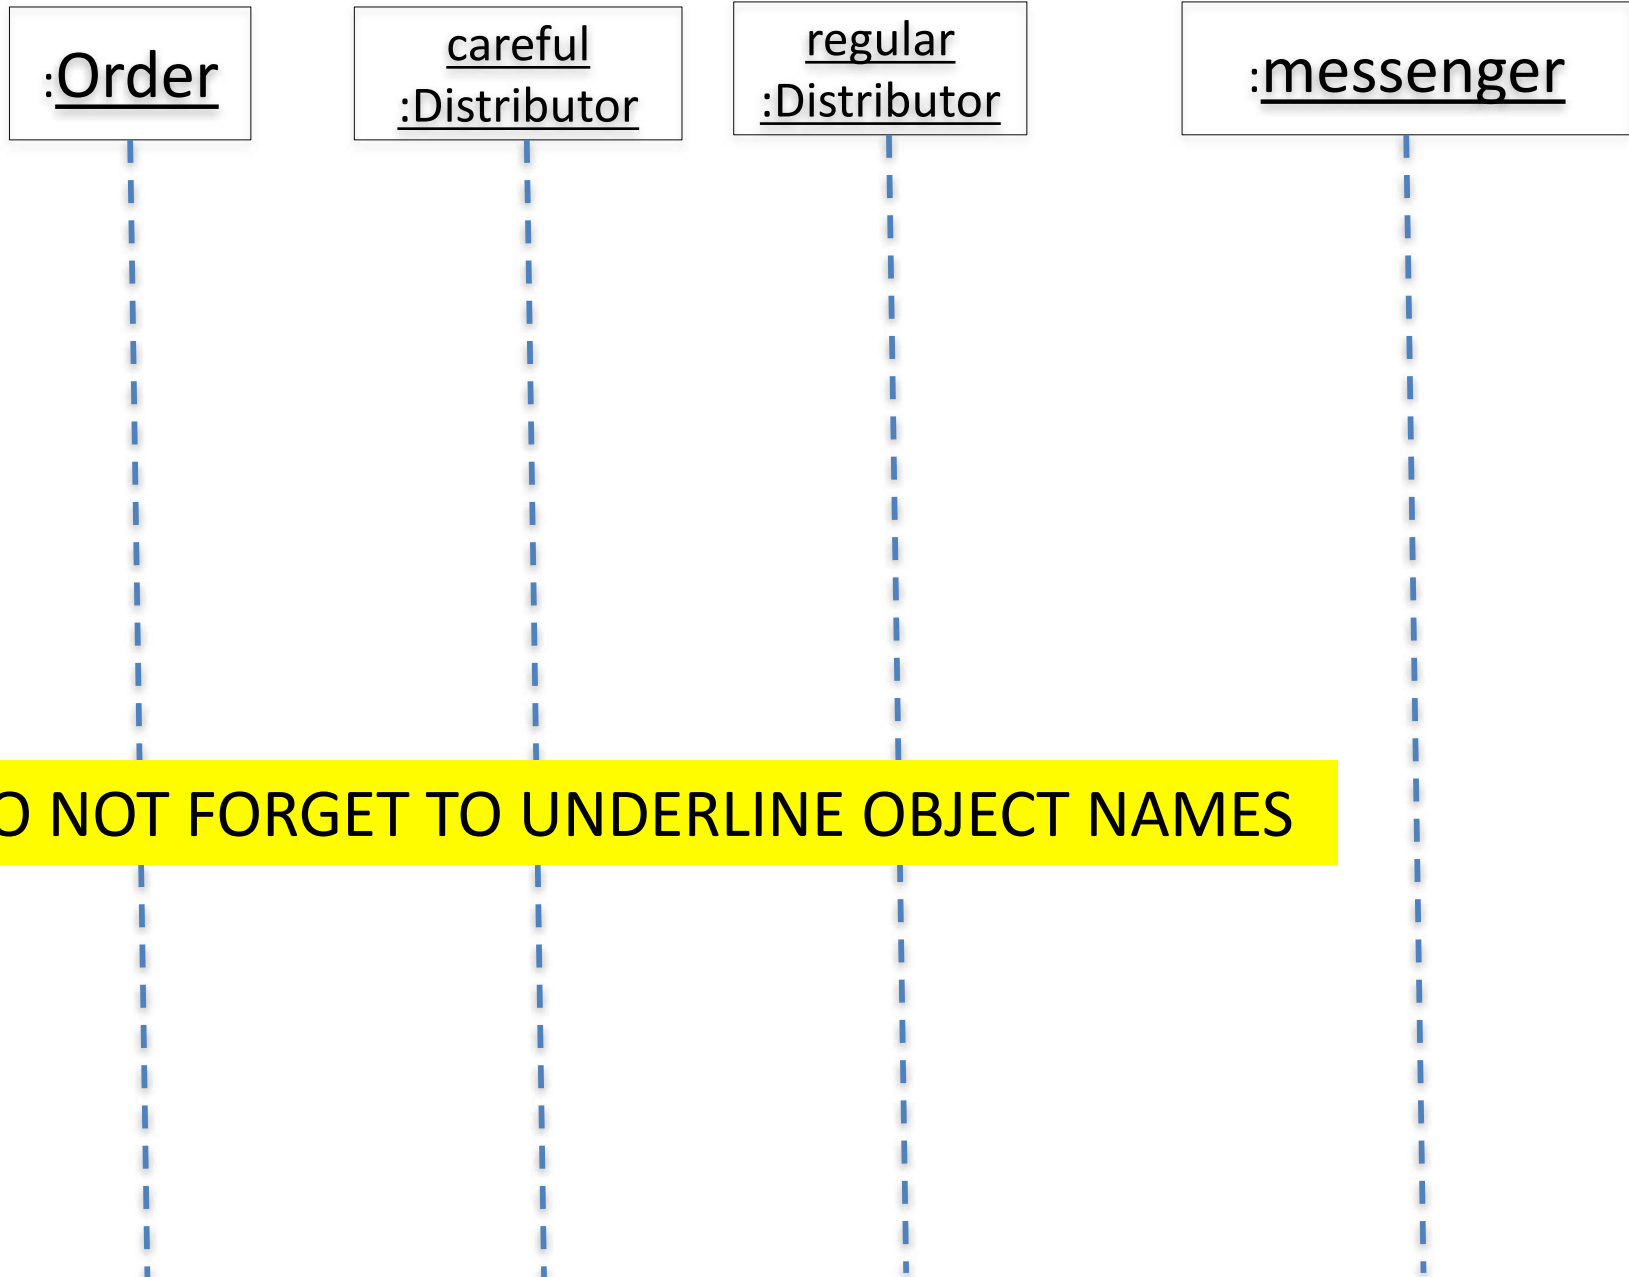

```
  if (product.value > $10K)
    careful.dispatch()
  else
    regular.dispatch()
  end if
```

```
end for
```

```
if (needsConfirmation) messenger.confirm()
```

```
end procedure
```

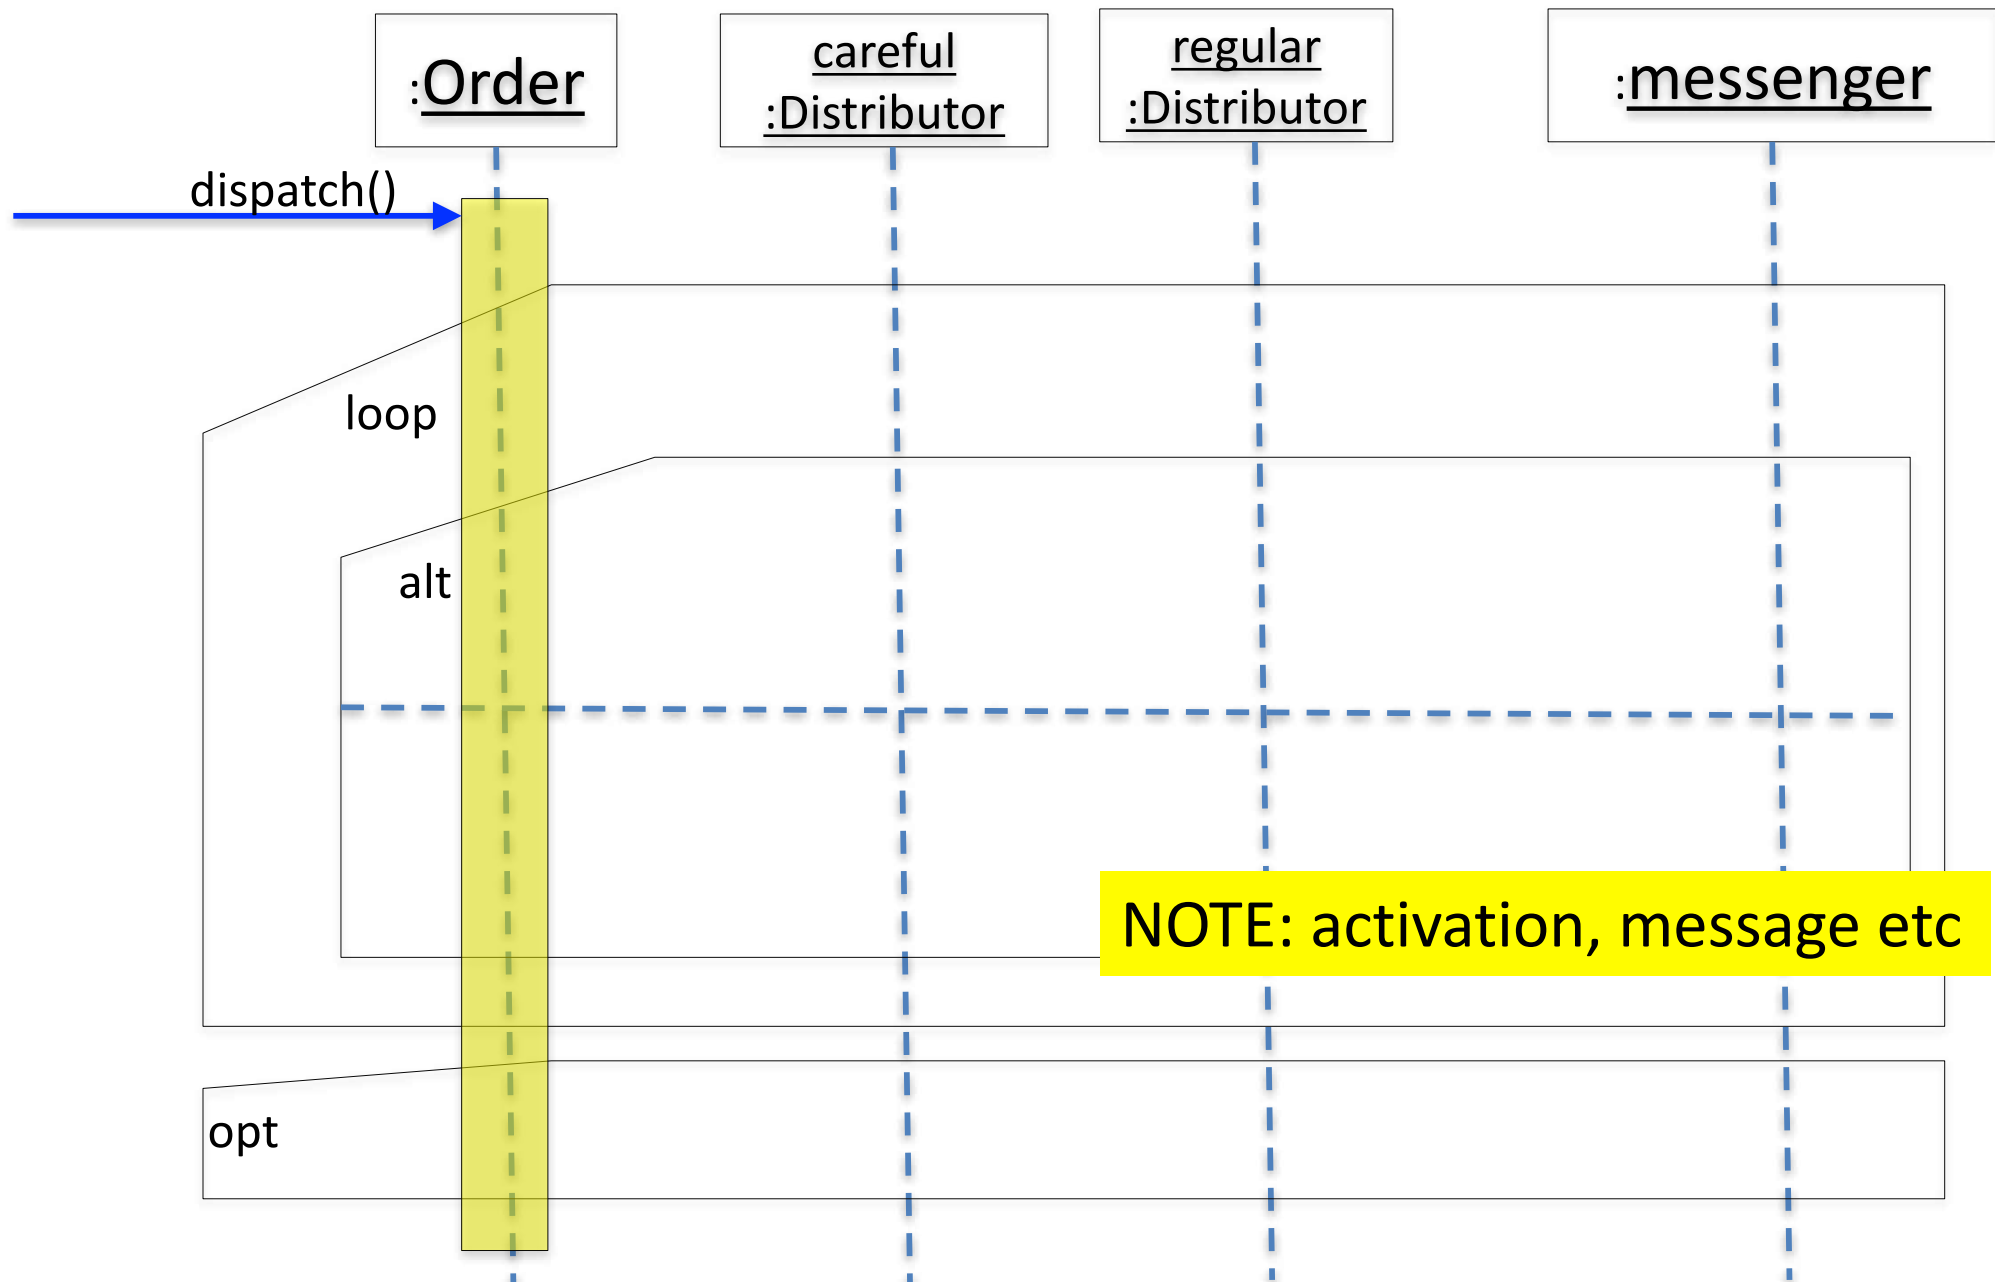

2. draw objs and lifelines

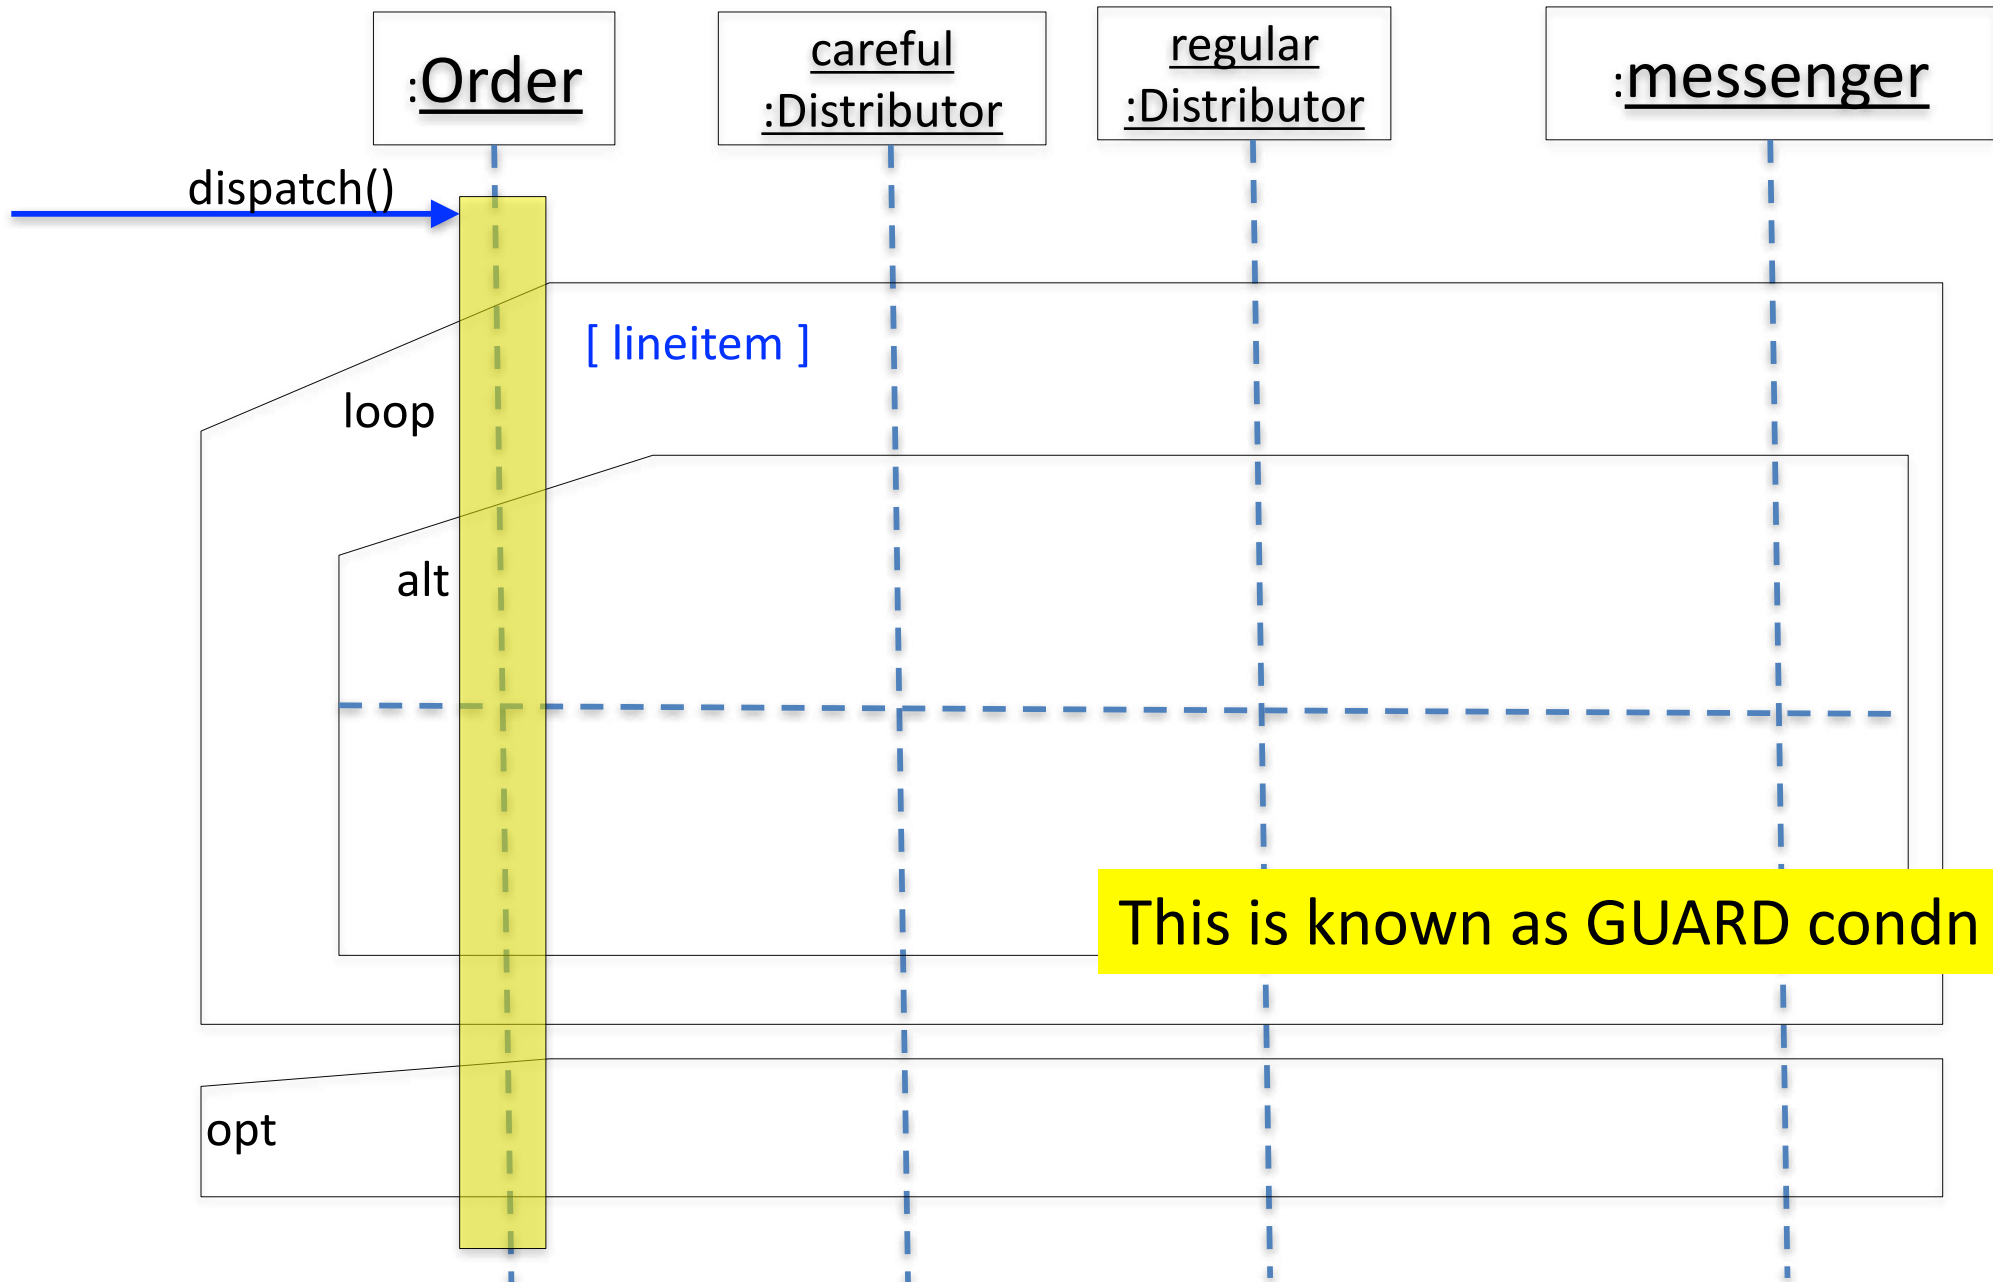

3. draw frames loop, alt, opt

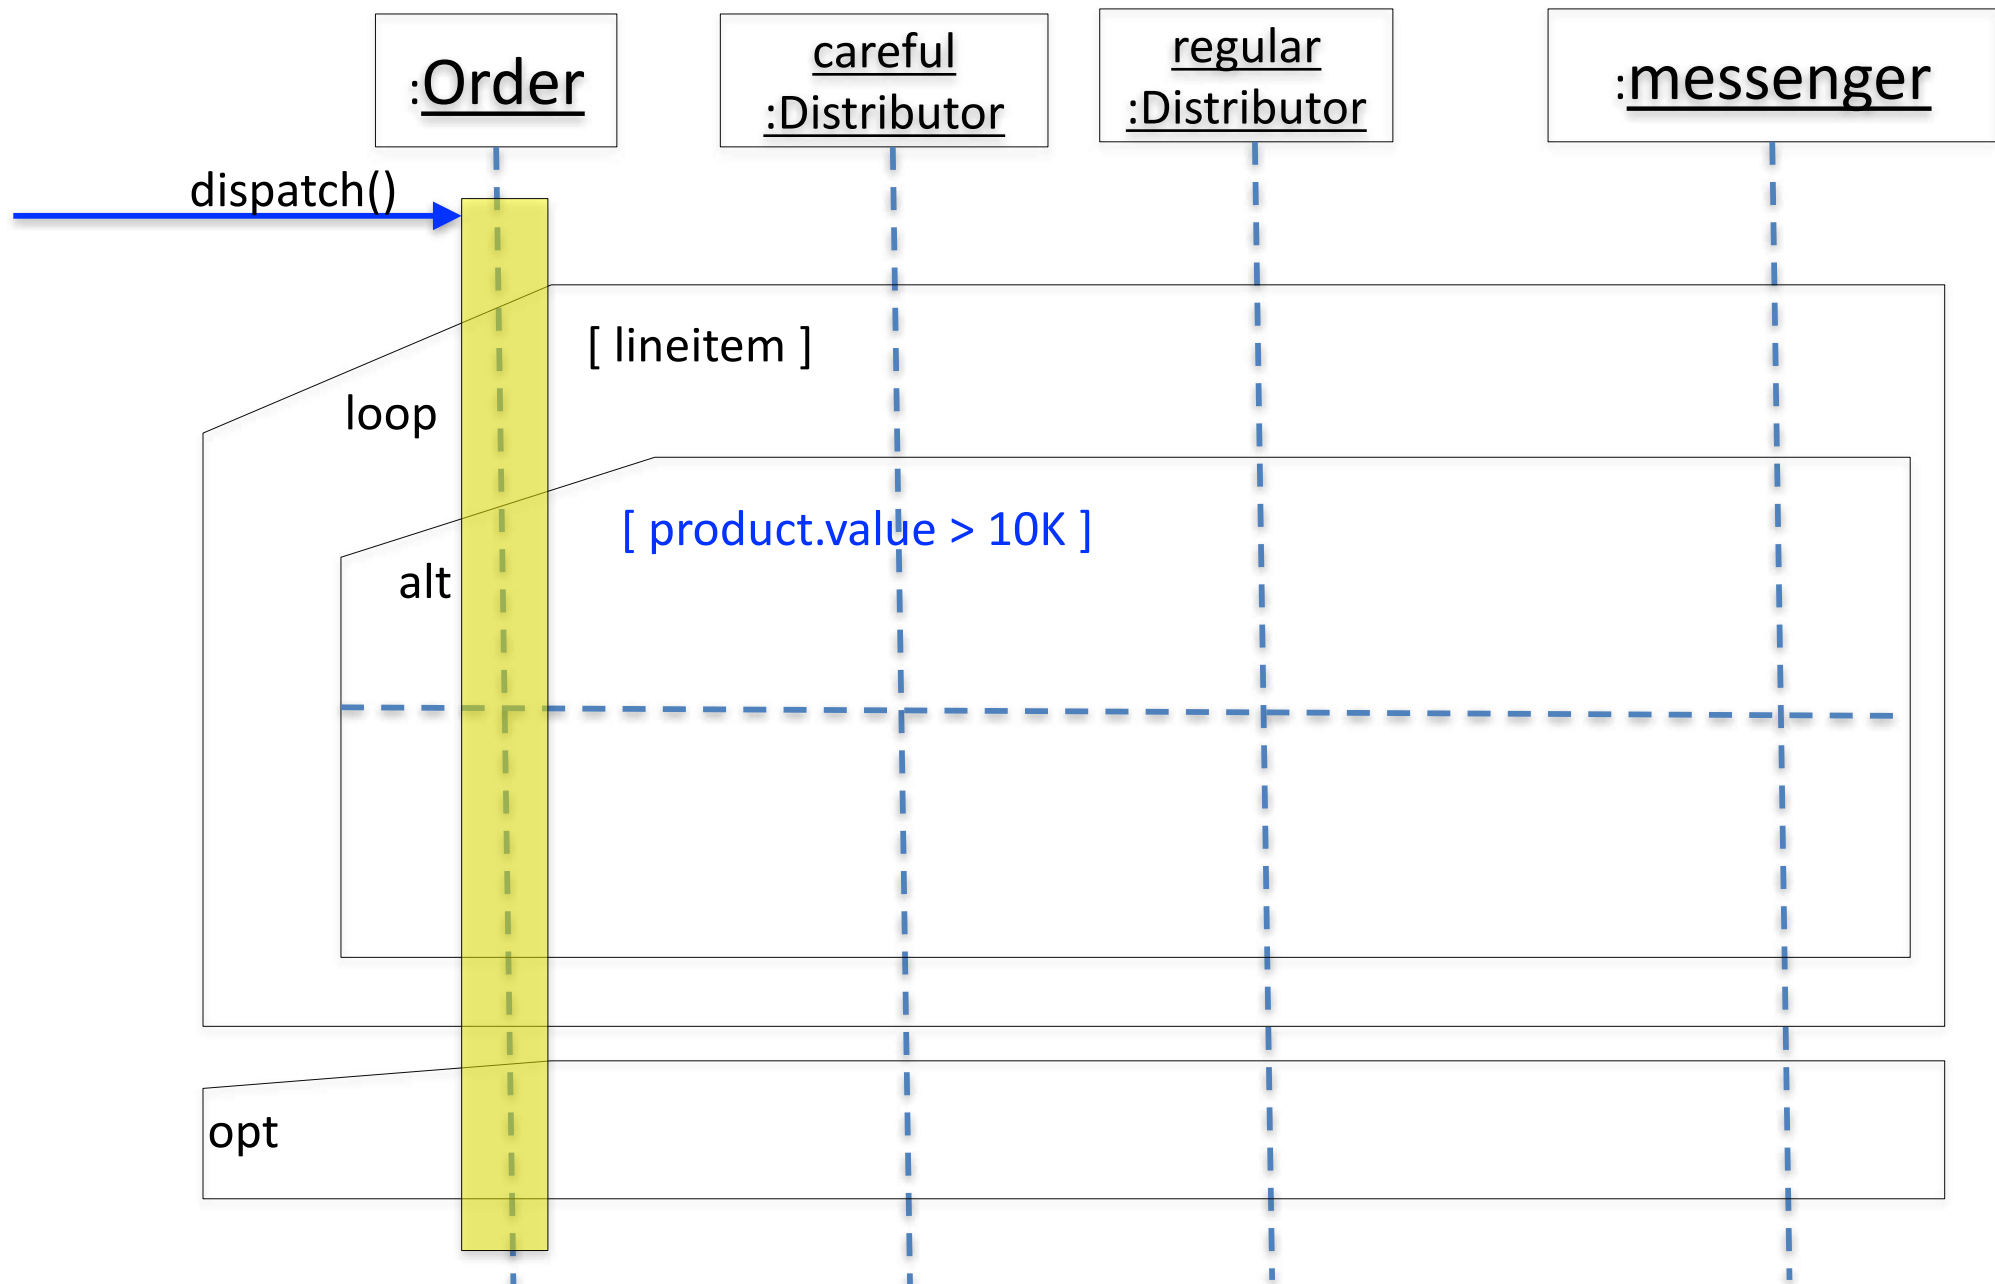

4. Invoke dispatch method

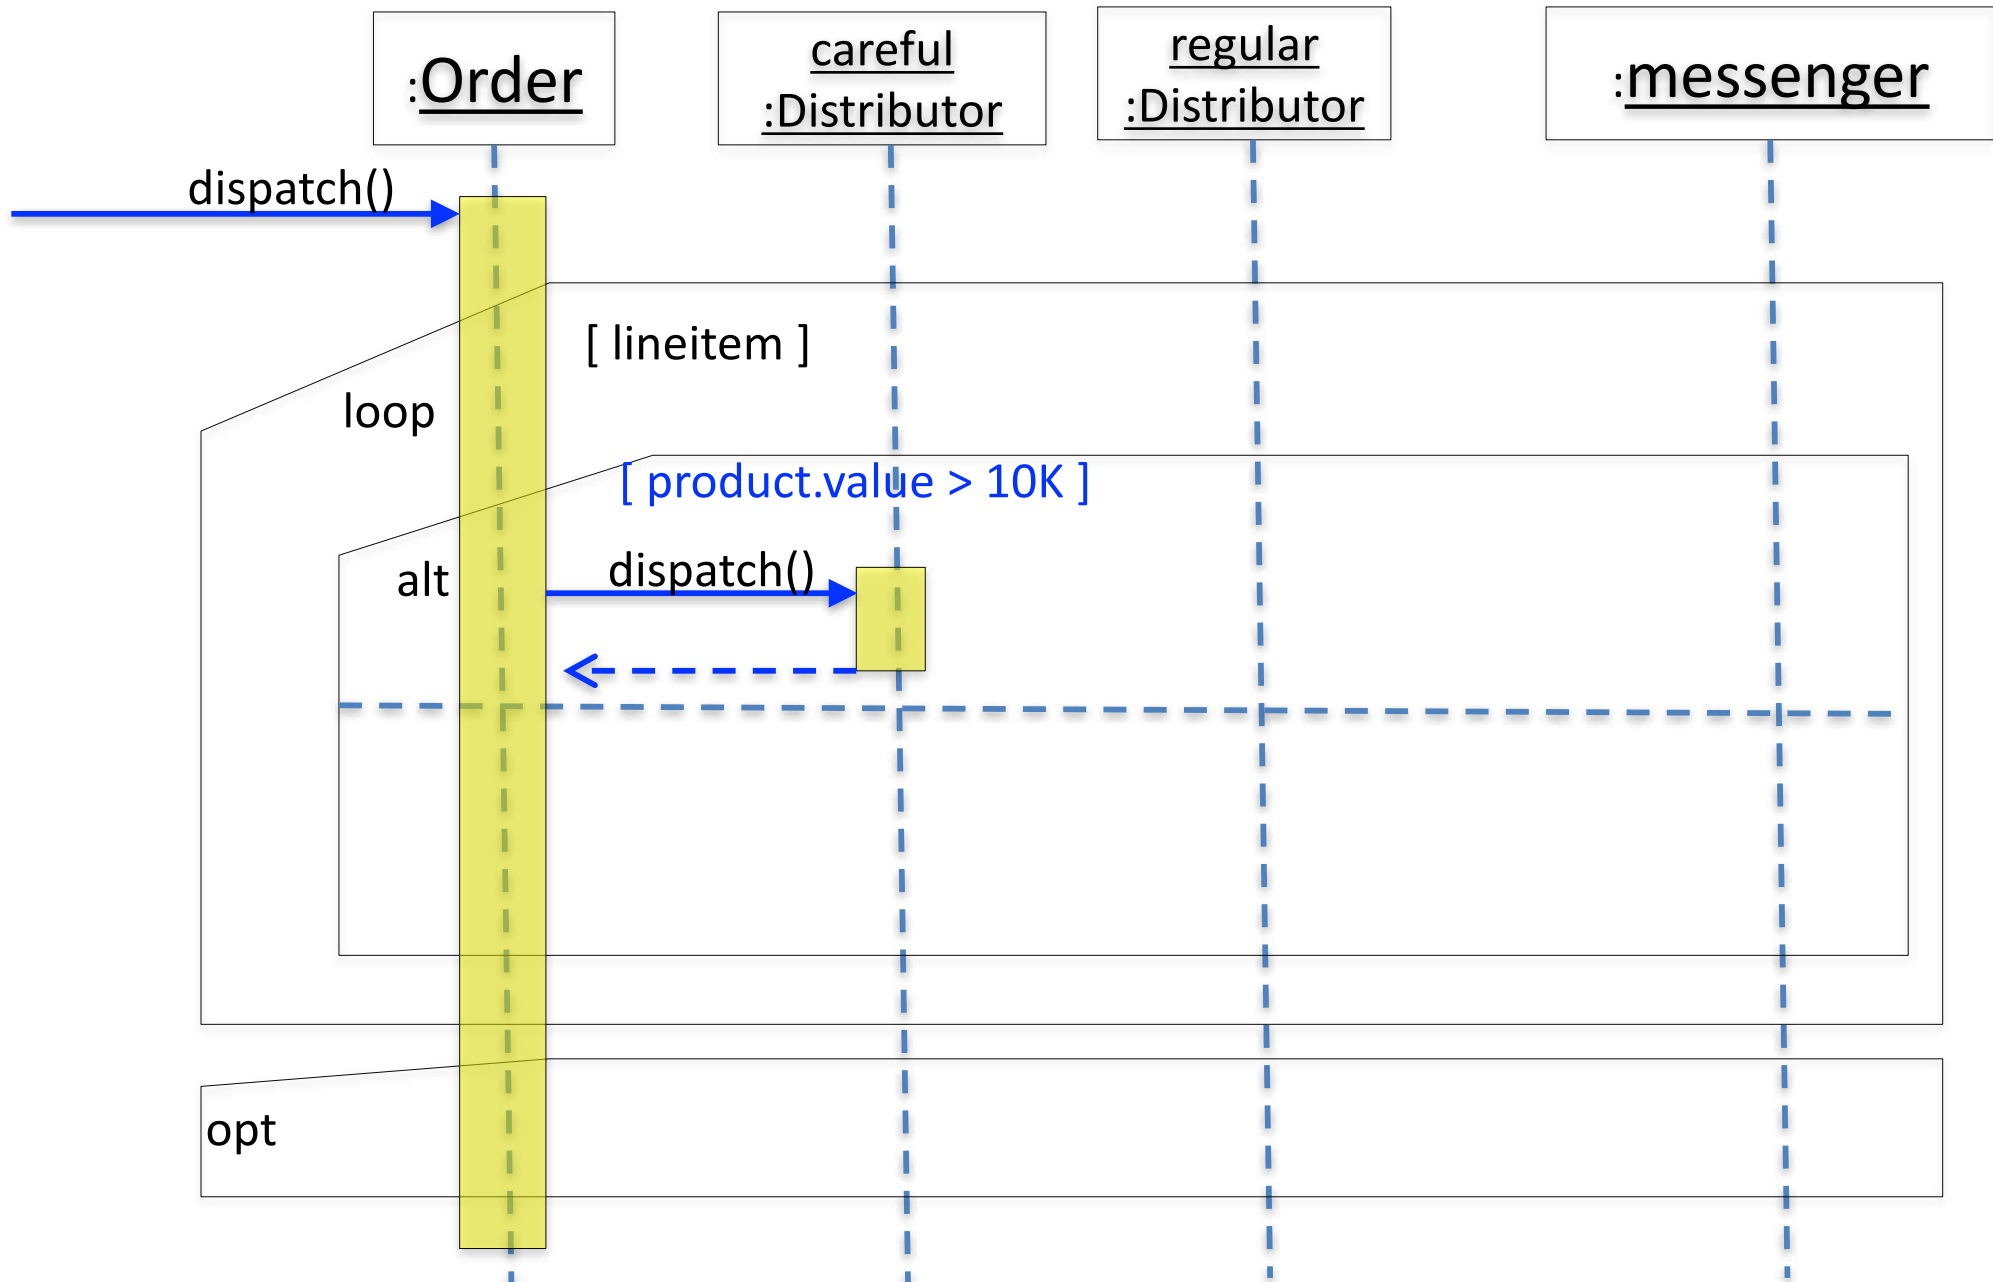

5. loop condition

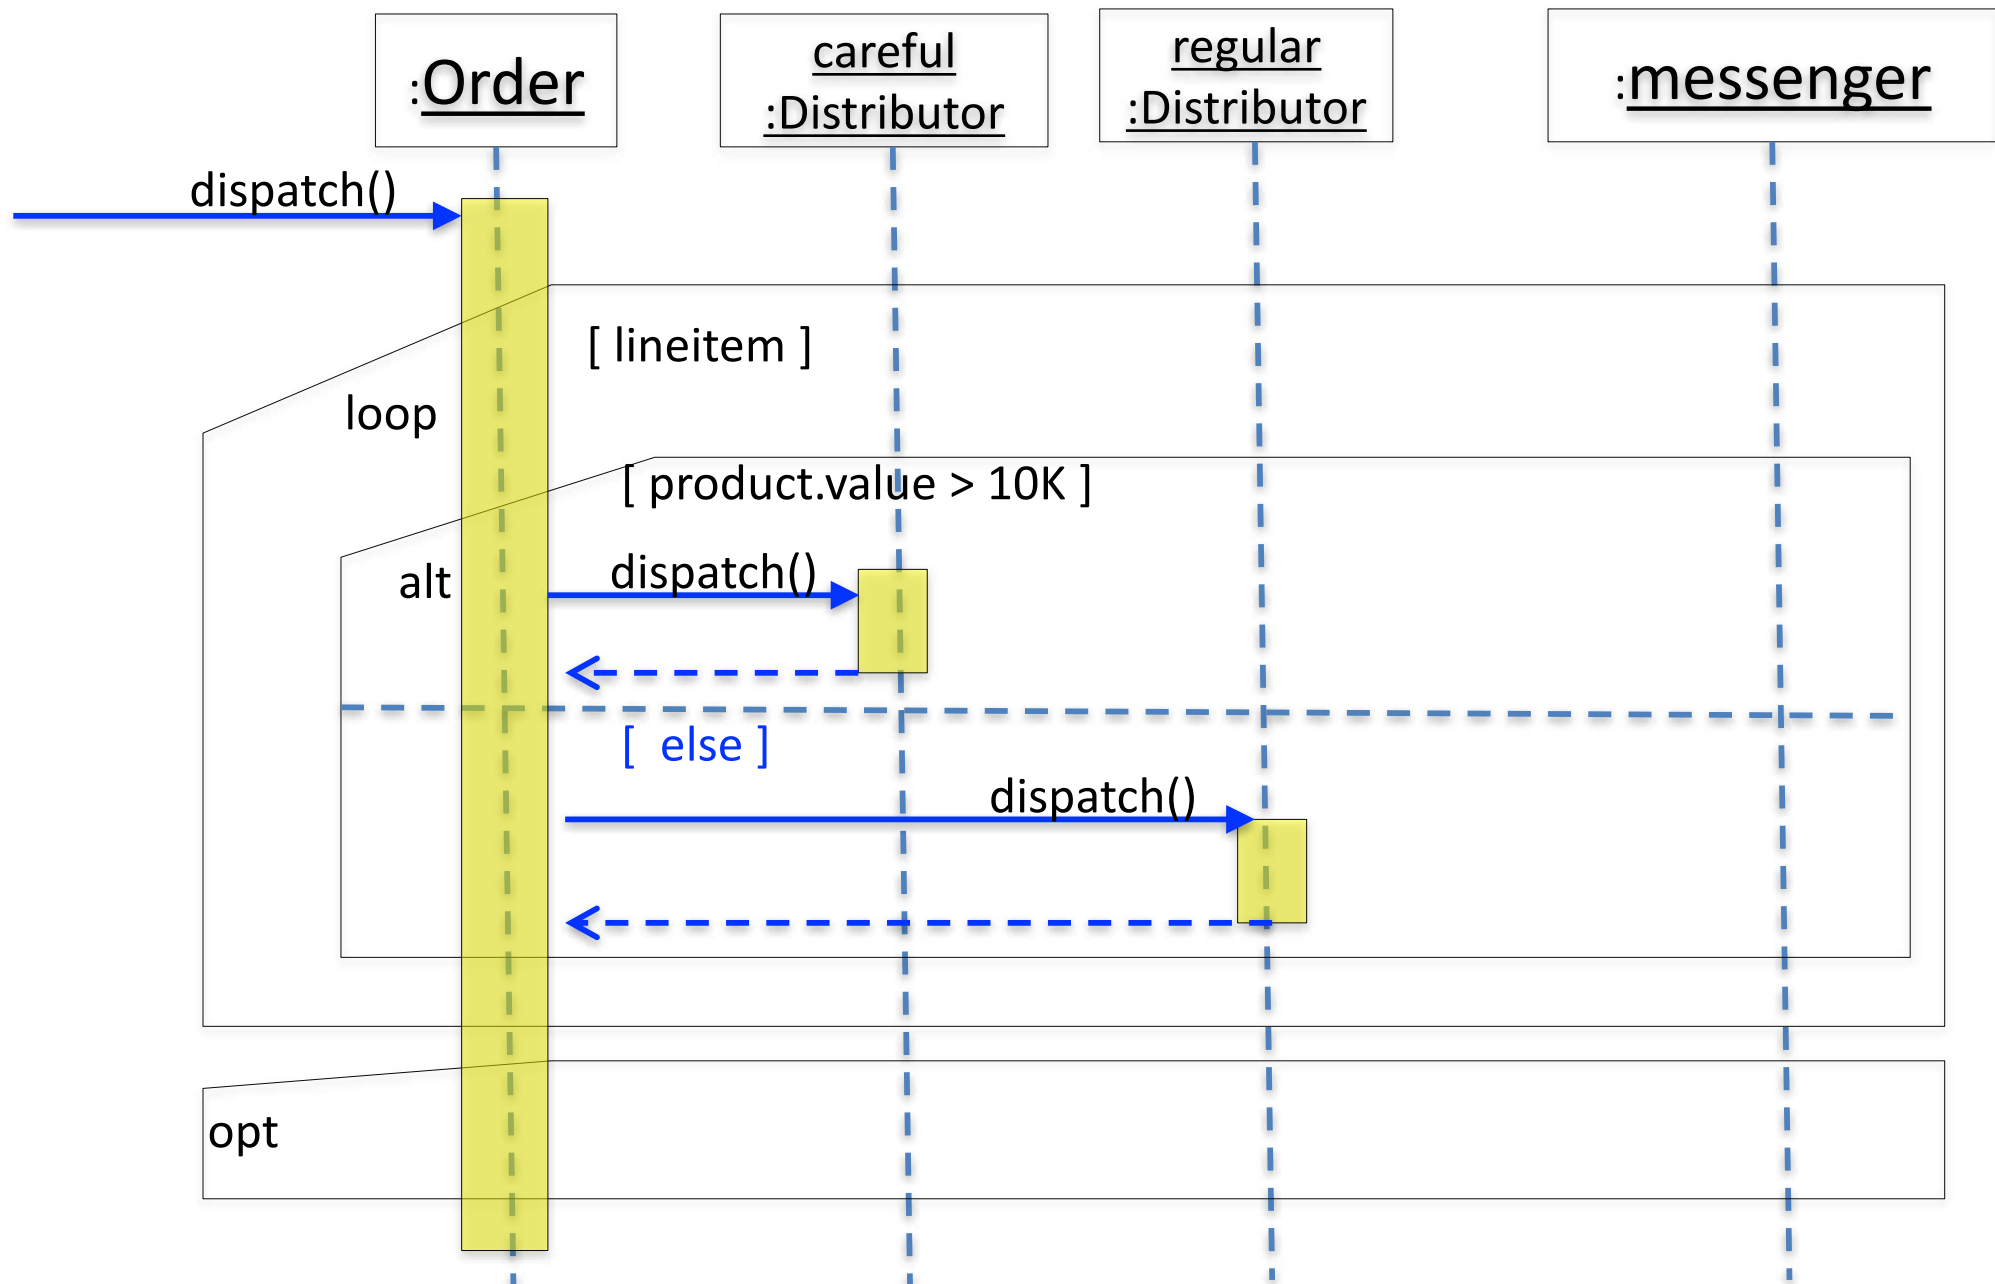

6. if condition

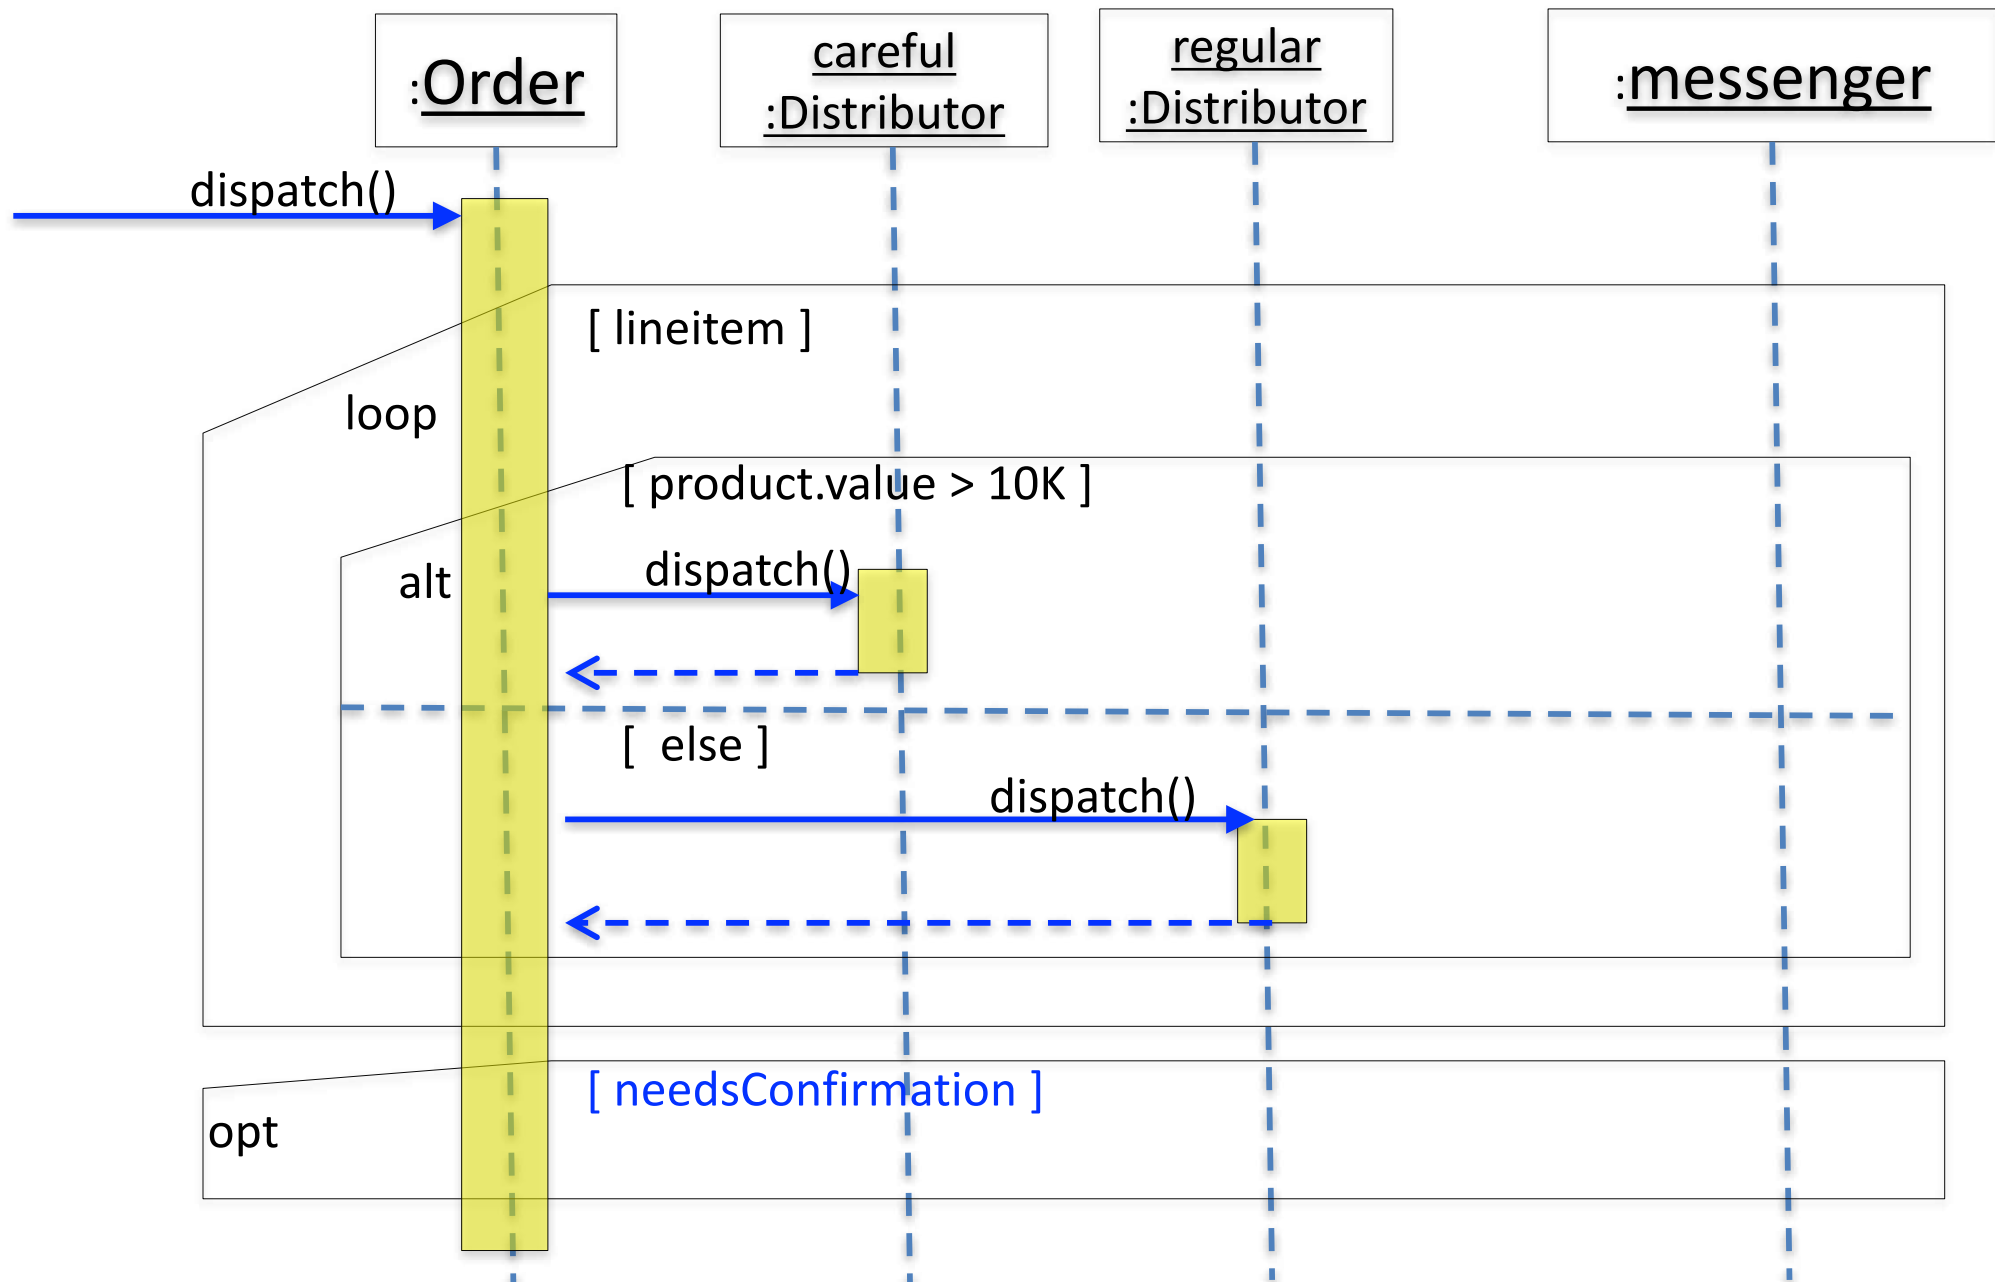

7. careful.dispatch()

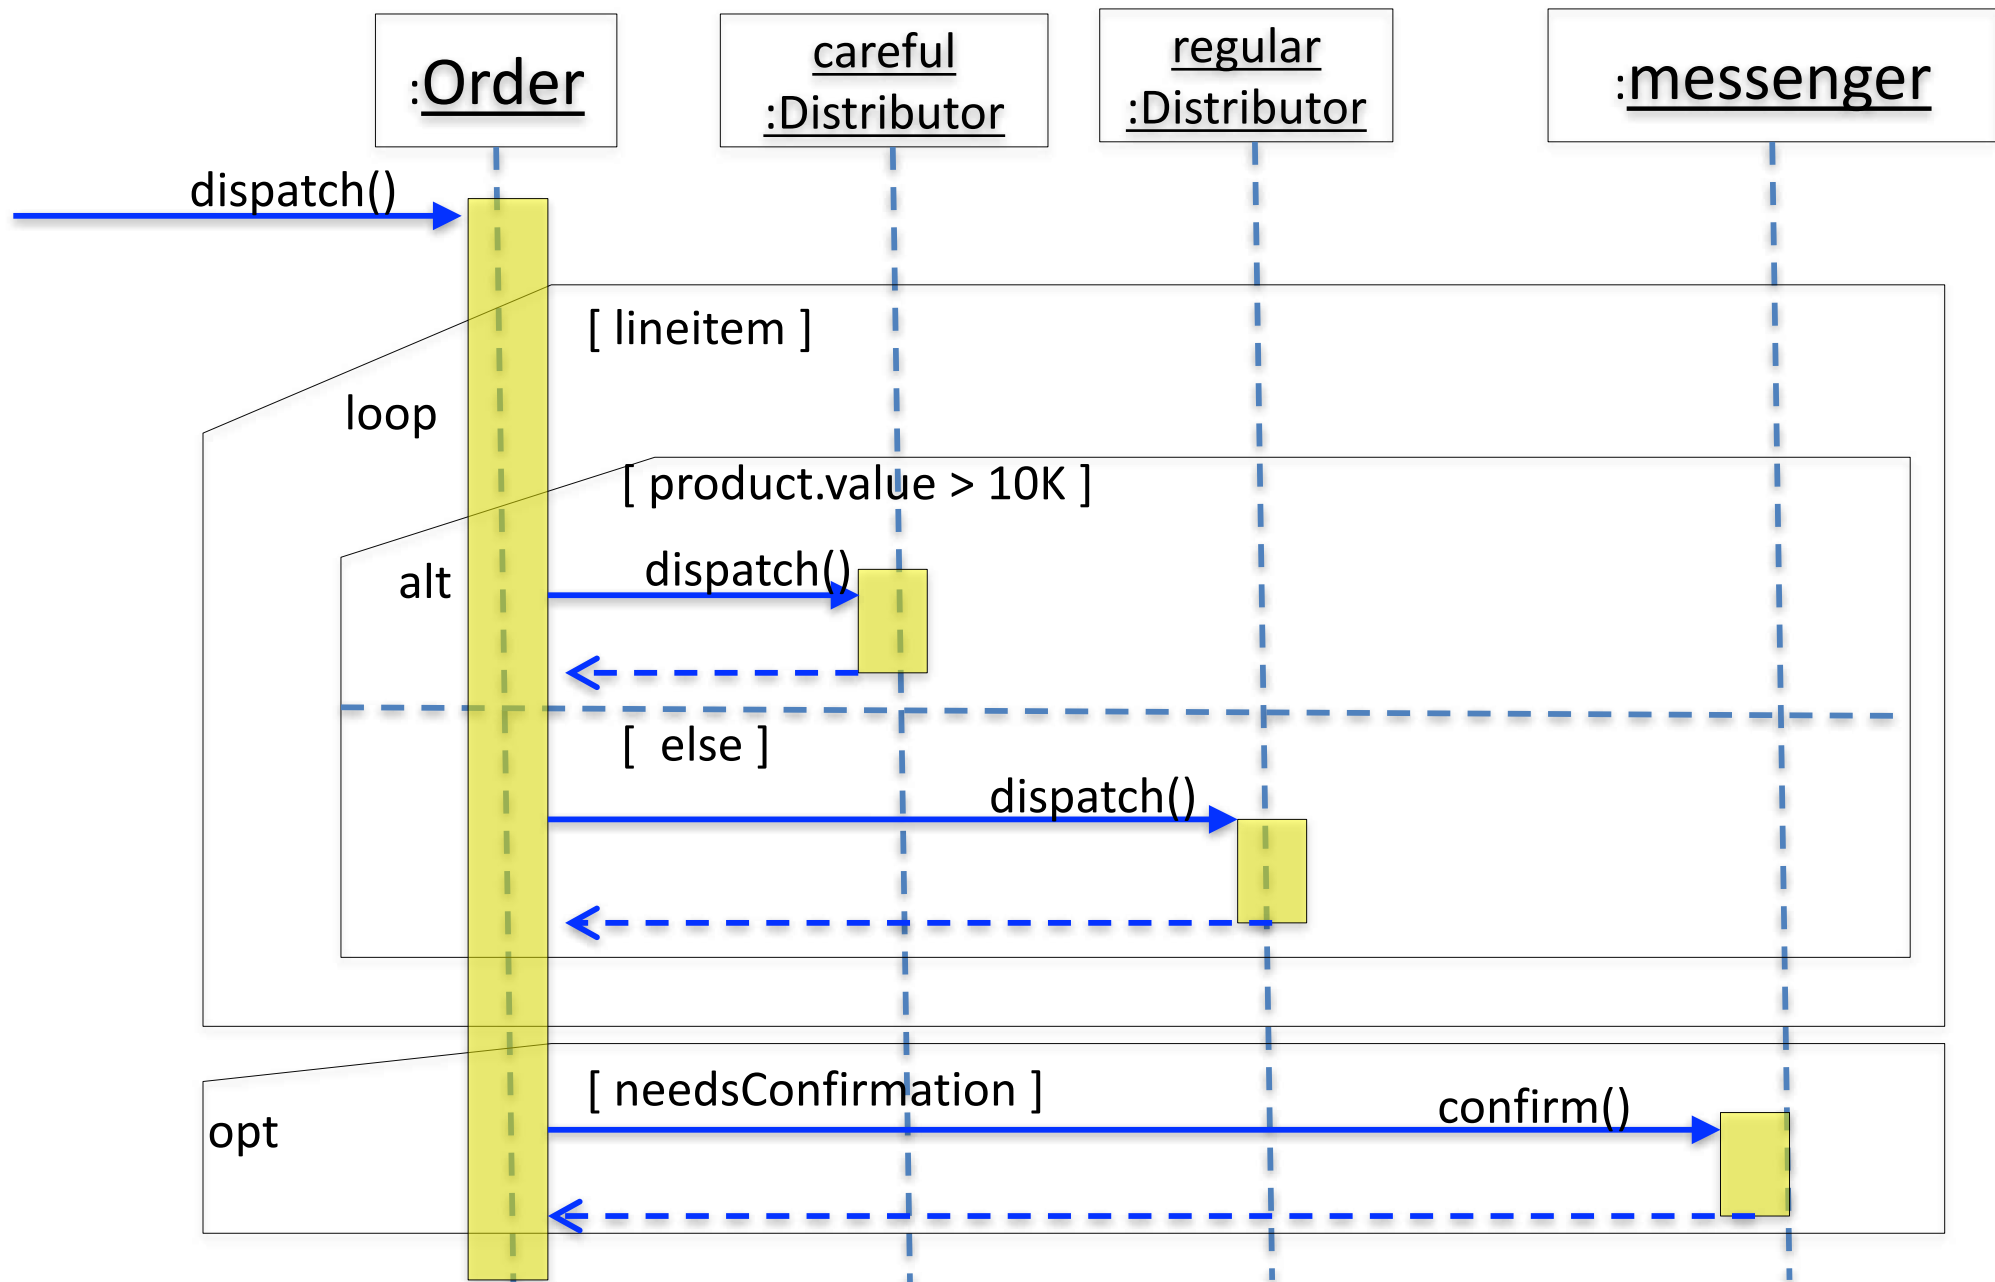

8. else & regular.dispatch()

8. opt condition

9. opt message

FINAL SEQ DIAG
