Submitted Oct 26 at 8:53pm

This attempt took 9 minutes.

Question 1

1 / 1 pts

The most significant source of risk in wireless networks is the underlying communications medium.

True

False

**Question 2****1 / 1 pts**

RADIUS is used to authenticate WiFi users

☒ True

☐ False

**Incorrect****Question 3****0 / 1 pts**

Given the OSI Reference Model (Application, Presentation, Session, Transport, Network, Data Link, and Physical Layers), the main technical differences between different IEEE 802.11 versions (a, b, g, ac) are done in the Network Layer

☒ True

☐ False

**Question 4****1 / 1 pts**

Although WPA2 is a stronger encryption algorithm for WiFi compared to WEP and WPA, WPA2 is slower than the aforementioned algorithms.

☒ True

☐ False

### Question 5

1 / 1 pts

For GSM (2G) Networks, the TMSI (Temporary Mobile Subscriber Identity) number is sent only one time when the mobile phone first register to the network

☐ True

☒ False

### Question 6

1 / 1 pts

3G networks are subject to Fake base station attack

☐ True

☒ False

### Question 7

1 / 1 pts

\_\_\_\_\_ is one of the weaknesses of 2G networks that were corrected by 3G networks

☒ Data Integrity

☐ Data Encryption between the user and the base station

☐ User Authentication

☐ User Anonymity

### Question 8

1 / 1 pts

IaaS provides service to customers in the form of software, specifically application software, running on and accessible in the cloud.

☐ True
