    A2 --> lt2["<"]
    A2 --> z2["z"]
    S2 --> A3["A"]
    S2 --> Else2["else"]
    A3 --> T5["T"]
    A3 --> C3["C"]
    A3 --> T6["T"]
    T5 --> x3["x"]
    T5 --> eq3["="]
    T5 --> 1["1"]
    Else2 --> S3["S"]
    Else2 --> A4["A"]
    S3 --> x4["x"]
    S3 --> eq4["="]
    S3 --> 0["0"]
    A4 --> T7["T"]
    A4 --> C4["C"]
    A4 --> T8["T"]
    T7 --> x5["x"]
    T7 --> eq5["="]
    T7 --> 0["0"]
```

d) These new grammar rules remove the ambiguity involved with F's "if B then S" and "if B then S else S". This allowed nested if/else statements to be represented through multiple avenues, as seen in my answer to 2a. I have removed the second option and replaced it with a smaller 'else' extension, as well as cleaning up other grammar rules.

Homework 1

3a) All four operators are left-to-right associative, as that is how they are defined in mathematics. For example, $1/2/3 \Leftrightarrow (1/2)/3$ and not $1/(2/3)$ as the latter would be undefined with integer mathematics.

b) According to standard charts (one given here:

<https://ee.hawaii.edu/~tep/EE160/Book/chap5/subsection2.1.4.1.html>),

The precedence of '*' and '/' are 12, and '+' and '-' are 11. This is parallel with the order of operations, where multiplication and division take precedence over addition and subtraction.

c) Here is a step by step walkthrough of exactly what is displayed by the parse tree.

Note: the 'Rule' column refers to the production rules, with rule 1.1 referring to $E \rightarrow E+T$.

String	Explanation	Rule
"E"	The string begins as the starter symbol 'E'	--
"E-T"	E_1 is turned into "E-T"	1.2
"T-T"	E_1 is turned into "T"	1.3
"F*T-T"	T_1 is turned into "F*T"	2.1
"y*T-T"	F_1 is turned into "y"	3.2
"y*F/T-T"	T_1 is turned into "F/T"	2.2
"y*x/T-T"	F_1 is turned into "x"	3.1
"y*x/F-T"	T_1 is turned into "F"	2.3
"y*x/z-T"	F_1 is turned into "z"	3.3
"y*x/z-F*T"	T_1 is turned into "F*T"	2.1
"y*x/z-z*T"	F_1 is turned into "z"	3.3
"y*x/z-z*F/T"	T_1 is turned into "F/T"	2.2
"y*x/z-z*z/T"	F_1 is turned into "z"	3.3
"y*x/z-z*z/F"	T_1 is turned into "F"	2.3
"y*x/z-z*z/y"	F_1 is turned into "y"	2.2

4a)

S \rightarrow SS | TC | T

C \rightarrow + | *

T \rightarrow 0 | 1 | 2

b)

S \rightarrow AC

A \rightarrow 0

B \rightarrow 1

C \rightarrow AC | ACB | ϵ

c)

1 \rightarrow 2

2 \rightarrow 7 | 3

3 \rightarrow 4 | 5

4 \rightarrow 6

5 \rightarrow 6

6 \rightarrow 2
